
Slight changes in performance may not be clearly noticeable day to day or week to week, but with longer tracking periods you could the see progress
ehfitch
There are so many different machines now it can be hard to find which one works best for you
jwyousey
If you don't know what workouts to do you might be working a muscle still in recovery
jwyousey
You cannot progressive overload as well without tracking your past workouts.
ehfitch
Progress becomes difficult with unorganized data.
Leo
Using multiple apps also exposes your data to many different possible leaks
jwyousey
If the gym doesn't have your usual equipment how do you know what to use
jwyousey
Because there are so many different classes/ workouts, you would need many people with different expertise to build a good functioning site
jwyousey
Many people might be discouraged to start without guidance of someone / something.
ehfitch
Group 20
Jack Yousey
Ethan Fritch
Matthew Rohrer
Leo Hamilton
Not knowing what workouts to selct.
ehfitch
Not tracking your workouts
ehfitch
Having to check past workouts to know what you did last time
Matt Rohrer
Using multiple apps can become tedious and expensive if subscriptions are required
ehfitch
Some gyms may not have the equipment you need to do your usual lifts
Matt Rohrer
There are so many different types of workouts and workout classes now it is hard to keep track
jwyousey
Lots of apps are predatory by design and lock important features behind paywalls, promising results with a subscription.
ehfitch
Why?
Problem:
Not knowing what to do at the gym, and not tracking your workouts.
Not having one tracker to do it all, track, recommend, build plans ...
jwyousey
What is stopping this from happening
Monetization of the apps cause companies to prefer having multiple apps for different services, to charge more.
ehfitch
Most people find it too hard to track all your exercises manually
Matt Rohrer
Not using an app that automatically surfaces past workout data.
Leo
There isn't a single app that can do all of these things, and have all of this data in one spot
Leo
Not knowing equivalent workouts to target the same muscles
Leo
Because there are so many it is hard to make one site that condenses all the information.
jwyousey
Corporate greed
Jwyousey
Running a server costs a lot of money and having a active database for our customers will be bind us by our finances.
ehfitch
Adding everything in one app could be very resource intensive and costly to develop.
ehfitch
The cost to store all the information for every exercise can be very costly
Matt Rohrer
The bank of different exercises is so large it is hard to put all of them in one system
jwyousey
